Profile

Computer Science student majoring in Data Science, aspiring to become a Data Engineer. Eager to improve my skills and apply academic knowledge to solve real-world problems and contribute to innovative projects.

Skills

- Programming: Java, C++, Python, JavaScript, TypeScript
- Web: HTML, CSS, Node.js, Express.js, EJS, Nest.JS
- Data: SQL, NoSQL (MongoDB), Data Analysis (Pandas, NumPy), Data Visualization (Power BI, Tableau)
- Other: OOP, Problem Solving, Database Management, Big Data Analysis

Internships

Full-Stack Software Engineer Intern, AvidBeam Technologies

08/2024 – 09/2024

- Developed tools and dashboards using JavaScript, HTML/CSS, Node.js.
- Implemented backend with Express.js and MongoDB (Mongoose).
- Participated in agile development, code reviews, and enhanced UX with dynamic EJS components.

Data Analysis and Visualization Intern, ICTHUB

07/2024 – 08/2024

- Analyzed structured data using Python and SQL.
- Built dashboards using Power BI and Tableau.
- Performed statistical analysis and presented findings to team.

Education

Bachelor of Science in Informatics and Computer Sciences, Data Science

German International University

Expected 01/2026

High School Diploma

Moder School of Egypt

Graduated 01/2022

Projects

- **Porsche Website** – Collaboratively built an interactive website for Porsche using JavaScript, HTML, and CSS, with dynamic content rendered via EJS templates and MongoDB integration using Mongoose. Enhanced user experience with clean UI design.
- **Coursera Clone Platform** – Developed a full-featured e-learning platform supporting multiple user roles (student, instructor, admin) using TypeScript, Next.js, and Nest.JS. Integrated MongoDB for data persistence and implemented authentication and role-based access control.

- **Game Development – “The Last of Us Legacy”** – Designed and built a 2D action-adventure game using Java and JavaFX for GUI, with character movement, enemy AI, and sound effects. Rebuilt the same game in C++ to strengthen understanding of memory management and game loops.
- **HomeSync Virtual Assistant** – Built a productivity-focused virtual assistant platform with calendar management, task tracking, bill payment, messaging, and room scheduling features. Utilized SQL for backend data storage and developed intuitive UI components.
- **AR-based Treasure Hunt Game** – Developed an augmented reality treasure hunt game using Unity and Vuforia SDK, allowing players to interact with virtual clues embedded in real-world environments. Applied AR principles and game design for engaging user experiences.

Achievements

- Ranked **Top 3** twice in Machine Learning competitions on Kaggle at university.

Languages

- Arabic: Native
- English: Upper Intermediate (B2)
- French: Upper Intermediate (B2)
- German: Elementary (A2)

Hobbies

- **Judo Practitioner** – Practicing Judo taught me discipline, resilience, and strategy.
- **Sports Enthusiast** – Passionate about fitness and physical training.
- **Machine Learning Competitor** – Regularly engage in ML challenges and competitions.
- **Tech Exploration** – Interested in latest tech trends and data tools.

Technical Interests

- **Data Engineering** – Passionate about building robust data pipelines, working with big data tools like Spark, Kafka, and Airflow.
- **Machine Learning** – Interested in practical ML applications in healthcare, education, and sports analytics.
- **Cloud Computing** – Learning AWS and GCP for deploying scalable ML models and analytics systems.
