

AHMED BAHAA

01020522886 • ahmedbahaa2004.ab@gmail.com • Cairo Egypt

Profile

Computer Science student majoring in Data Science, aspiring to become a Data Engineer. Eager to improve my skills and apply academic knowledge to solve real-world problems and contribute to innovative projects

Skills

- Java
- C++
- Object-Oriented Programming (OOP)
- SQL
- Python
- JavaScript
- HTML
- CSS
- Data analysis
- Data visualization
- Problem solving
- Database management
- NoSQL databases
- Big data analysis

Internships

- 08/2024 - 09/2024
Full-Stack Software Engineer Intern, **AvidBeam Technologies**, Cairo, Cairo
- Contributed to the development of internal tools and dashboards using **JavaScript**, **HTML/CSS**, and **Node.js**.
 - Implemented backend services using **Express.js** and database integration with **MongoDB (via Mongoose)**.
 - Worked in an agile development environment, and participated in daily stand-ups and code reviews.
 - Improved user experience on a client dashboard by adding dynamic components with **EJS templating**.
 - Learned and applied full-stack principles under the supervision of experienced engineers.
- 07/2024 - 08/2024
Data Analysis and Visualization Intern, **ICTHUB**, Cairo, Cairo
- Gained hands-on experience in analyzing structured data using **Python (Pandas, NumPy)** and **SQL**.
 - Created interactive data dashboards using **Power BI** and **Tableau**.
 - Cleaned and prepared real datasets, performed statistical analysis, and visualized key insights to support internal decision-making.
 - Participated in team discussions to interpret data-driven insights, and present results to mentors.

Education

- Expected in 01/2026**
Bachelor Of Science, Informatics and Computer Sciences, Data Science
German International University
Expected Graduation: 2026
- 01/2022**
High School Diploma

Main Projects

- Porsche Website, Collaboratively developed a website for Porsche using JavaScript, HTML, EJS, and Mongoose to create an interactive platform with dynamic content generation.
- Coursera Website, Designed and developed a comprehensive website for Coursera, incorporating functionalities for student, instructor, and administrator roles using TypeScript, Next.js, Nest.JS, and Mongoose.
- Game Development, Developed a game from scratch inspired by 'The Last of Us Legacy' using Java and JavaFX for the GUI. Developed the same game using C++.
- HomeSync, Developed 'HomeSync,' a virtual assistant website using SQL that enhances productivity by integrating calendar management, task tracking, messaging, bill payments, room activity scheduling, and travel information.
- AR-based Treasure Hunt, Developed an AR-based 'Treasure-Hunt' using Unity that immerses players in an interactive experience by integrating virtual objects into real-world environments.
